

Ethical procurement

Our ethical procurement approach is embedded in our supply chain procurement and management. As a buyer of goods and services, we have a responsibility for the supply chains from which these goods and services come into our organisation. We will take into account ethical, as well as commercial and technical, factors when considering which suppliers with whom we wish to partner. The ethical standards we expect from ourselves and our suppliers are set out in our Sustainable Procurement Supply Chain Charter 2019.
